

How to Extract Files :-

1- DOWNLOAD ALL FILE PARTS FIRST, PLACE ALL FILES IN SAME FOLDER, all files are required to extract , otherwise won't work with single file.

2- Download 7Zip - <https://www.7-zip.org/download.html>

Android - <https://play.google.com/store/apps/details?id=org.joazipperplus7&hl=en>

This can be done through WinRAR or any other archiver with 7Z support.

We don't Zip and instead 7Z because of better compression and file name encryption.

3- The files are split, so will appear like below (if renamed while downloading. RENAME and make it like below)

FileName.7z.001

FileName.7z.002

FileName.7z.003

FileName.7z.004

FileName.7z.005

and so on.

IMPORTANT - all files are of same name, only extension is changing like .7z.001 , .7z.002, .7z.003.....

3- Once all files are downloaded, only extract the first File - [FileName.7z.001] - Right Click - 7Zip- Extract Here/ To Folder.

4- When Downloading from sources like telegram, always make sure that file names are similar, as many times the file names are changed.

5- Again mentioning - Extract the first file only.

NOTE: It also does not means other files are useless, all the files are not in place , you are most likely getting an error.
